Elections are about Multiple Issues

To what extent do you [agree or disagree] with the following statement: Elections aren't just about one issue. You have to look at each candidate as a whole and evaluate how much they align with your values on multiple issues, regardless of how you might feel about a specific issue.

	Total	Age					Gender		Education		Race

Trump is Dangerous

You previously indicated that you disapprove of the way Biden is handling the U.S. response to the war in Gaza. To what extent do you [agree or disagree] with the following statement: Regardless of how much you might disagree with Biden's response to the war in Gaza, he should be re-elected because it is too dangerous to U.S. democracy to risk Trump getting back into office.

Asked of those who think Trump is a threat and disapprove of Biden's choices

	Total	Age					Gender		Education		Race

PublicWise - Single Issue Voter - Base Sample Crosstabs

Online sample of 5,125 voters fielded from March 21 to April 03, 2024.

Margin of error: +/-1.4%.

This survey is based on 5,125 interviews conducted by YouGov on the internet of registered voters. The sample was weighted according to gender, age, race/ethnicity, education, and U.S. Census region based on voter registration lists, the U.S. Census American Community Survey, and the U.S. Census Current Population Survey, as well as 2020 Presidential vote, party identification, and voter turnout. Respondents were selected from YouGov to be representative of registered voters. The weights range from 0.32 to 5.13 with a mean of 1 and a standard deviation of 0.34.

The margin of error (a 95% confidence interval) for a sample percentage p based upon the subsetted sample is approximately 1.4%. It is calculated using the formula:

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
